CLON

Your life. Your rules. Your clone.

A personal AI operating system that coordinates work, communication, life and well-being - without taking control away from you.

3-MINUTE PRESENTATION

Open source · AI hackathon

Our digital life is fragmented

Calendar, email, tasks, events and fitness compete for the same schedule - but do not share context.

01

Fragmented context

Each app knows only part of your routine.

02

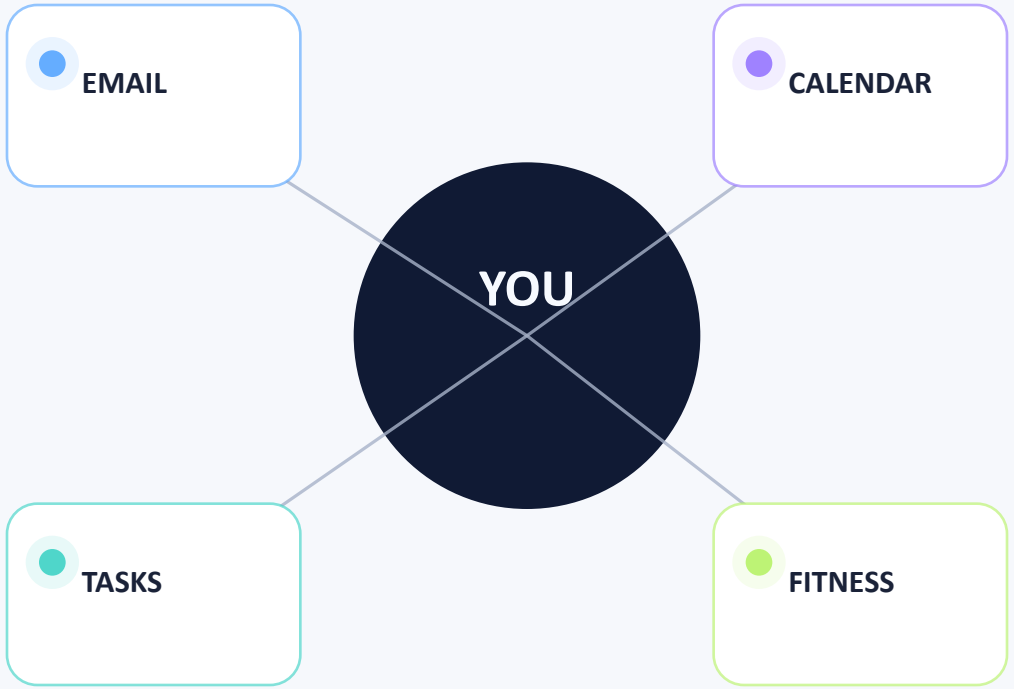

Conflicting decisions

One priority takes a slot another app considered free.

03

Automation without trust

Agents that act without explanation increase risk.

One master agent. Four specialists.

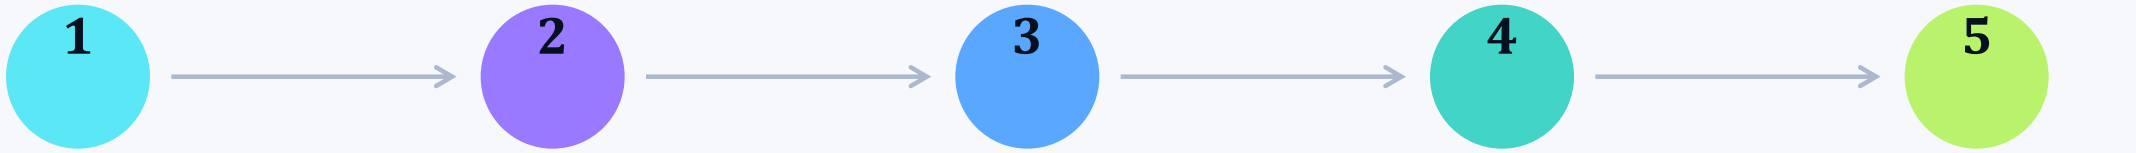

The Master Clone understands intent, delegates work and combines the results into one coherent response.

Specialization without silos: every clone uses shared services.

From intent to action, with you in the loop

Example: "Help me organize tomorrow."

UNDERSTAND

Interprets the request

DELEGATE

Activates the clones

ADD CONTEXT

Reads schedule and data

APPROVE

Shows the proposed change

EXECUTE

Acts and records

HUMAN CONTROL

Reads may be automatic. Calendar changes and drafts follow permissions and approval.

Every step produces progress, artifacts and an auditable history.

Trust you can already demonstrate

The MVP runs without API keys and clearly separates simulated results from real actions.

01 Human control

Emails are never sent. Relevant changes require permission and approval.

02 Security by design

Prompt injection is blocked; tokens are temporary and tied to the action.

03 Operational truth

Demo and Live are labeled. A real failure never becomes simulated success.

THREE READY-TO-RUN DEMOS

"Organize my tomorrow"

focus + workout + approval

"Summarize my emails"

safe inbox triage

"Find a free workout slot"

conflict-free scheduling

Fewer apps. More coordination.

Your life. Your rules. Your clone.
